Art Unit: 2626

DETAILED ACTION

This communication is in response to the Application filed on 01/22/2004. Claims
 1-21 are pending and have been examined.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 01/22/2004 and 08/01/2005 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Specification

3. The disclosure is objected to because of the following informalities: "sine" should be "since" on age 10; [0034], last line.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abella *et al.* (US 6,044,347) in view of Young ("Dialog Structure and Plan Recognition in Spontaneous Spoken Dialog", 1993).

Art Unit: 2626

As to claims 1, 14, and 18 Young et al. discloses,

a disambiguation method in a spoken dialog service (see col. 6, lines 34-45) that identifies a user need (see col. 7, lines 45-46), the disambiguation method being associated with a rooted tree (see Figure 4), the method comprising:

- (a) based on a received user utterance in response to a prompt (see col. 4, lines 43-44), establishing at least one lit node and assigning a current focus node (see col. 9, lines 41-44 and lines 50-67) (e.g. From the former cited section, a tree based approach is used by the dialog manager. The latter citation develops an example. The use of the lit nodes and focused nodes is implied by the reference when used with a tree based hierarchical structure. The example shows multiple occurrences of Atlantic City. The user is asked whether Atlantic City is a movie, which is a focus node, and the lit node being the movie and location headings as seen in Figure 4).
- (c) if there is not a single direct descendent of the current focus node that is lit:
 - (1) assigning a lowest common ancestor node of all lit nodes as a new focus node (see col. 9, lines 41-44 and lines 50-67)e.g. From the example illustrated, since there is no direct descendent, the user is prompted and the focus node is moved to the heading movie.);

Art Unit: 2626

(2) prompting the user for input to disambiguate between descendent nodes of the new focus node (see col. 9, lines 41-44 and lines 50-67); and

(3) returning to step (a) (e.g. Since the user has helped in the disambiguation, it is implied that the system will reset or end).

However, Abella *et al.* does not specifically disclose the descendents of the focus node.

Young discloses

- (b) if there is a single direct descendent of the focus node that is lit (see page 7, sect. 4, 1st paragraph, and bullets 1-10) (e.g. It is implied by the reference that as each new question is being asked the focus node is changing. As seen the focus node changes from pizza, slices, and toppings (*see page 9, last paragraph).
 - (1) assigning the lit direct descendent of the current focus node as a new focus node (see Figure 9, last paragraph) (e.g. The transition from one attribute to another regarding the pizza changes the focus of the dialog).;
 (2) if the new focus node is a leaf node, identifying the user need (see sect. 4, 1st paragraph, and bullets 3-10) (e.g. The size of the pizza is determined where the size is the leaf node and requesting from the user size type desired).
 - (3) if the new focus node is not a leaf node, prompting the user to disambiguate between descendent nodes of the new focus node and

returning to step (a). (see sect. 2.1, example, types of olives for toppings is requested from the user and disambiguation has taken place to determine which olives the user desires.);

It would have been obvious to one of ordinary skilled in the art at the time the invention was made to have modified the dialogue management system using a tree based structure as taught by Abella *et al.* with the inclusion of leaf nodes as taught by Young. The motivation to have combined the two references involves the clarification of the attribute that is active (see Young, pages 7, sect. 4, last paragraph-page 8, lines 1-9 and last paragraph).

As to claims 2, 15, and 19 Abella et al. and Young discloses wherein,

if after step (a), only one lit node exists that is not a direct descendent of the focus node, and the one lit node is a leaf node (see Abella *et al.*, Figure and col. 9, lines 41-44 and lines 50-67) (e.g. From the cited portions, term "Atlantic City" is searched, which is not a direct descendent of the focus node, element 60 of Figure 4), the method further comprises:

(d) identifying the user need according to the lit leaf node (see Abella et al.,col. 9, lines 61) (e.g. The user is asked whether the term "Atlantic City" is a location or a movie title.)

As to claims 3, 16, and 20 Abella et al. and Young discloses wherein,

Application/Control Number: 10/763,085

Art Unit: 2626

wherein if only one lit node exists that is not a direct descendent of the focus node and the one lit node is a leaf node, the method further comprises presenting information to the user regarding a condition of the lit leaf node (see Abella *et al.*, col. 9, lines 61) (e.g. The user is asked whether the term "Atlantic City" is a location or a movie title.)

As to claims 4, 17, and 21 Abella et al. discloses

wherein a first prompt to the user is associated with a root node of a rooted tree (see Abella *et al.*, Figure 4 (element 60 is a root node, with the subsequent nodes below as a rooted tree).

As to claims 5 and 10, Abella et al. discloses

a dialog manager within a spoken dialog service, the dialog manager operating according to a dialog disambiguation rooted tree, the rooted tree having a root node, nodes descending from the root nodes organized in categories and leaf nodes, the dialog manager performing the steps:

(a) gathering input from a user to match (see col. 4, lines 43-44), with at least one node and node condition, wherein a first prompt from the dialog manager relates to a focus root node(see col. 9, lines 41-44 and lines 50-67) (e.g. From the former cited section, a tree based approach is used by the dialog manager. The latter citation develops an example. The use of the lit nodes and focused nodes is implied by the reference when used with a tree based

Application/Control Number: 10/763,085

Art Unit: 2626

hierarchical structure. The example shows multiple occurrences of Atlantic City.

The user is asked whether Atlantic City is a movie, which is a focus node, and the lit node being the movie and location headings as seen in Figure 4).

- (b) lighting at least one relevant node according to the received user input (see col. 9, lines 41-44 and lines 50-67);
- (c) generalizing by attempting to select a new focus node further from a current focus node (see col. 9, lines 41-44 and lines 50-67) by:
 - (2) assigning a lowest common ancestor node as a new focus node if there are multiple descendent nodes that are lit and step (c)(1) does not apply (see col. 9, lines 41-44 and lines 50-67) (e.g. From the example illustrated, since there are multiple descendent nodes with the information "Atlantic City".);

However. Abella *et al.* does not specifically disclose the assigning of a focus node if it is a direct descendent of the focus node previously.

Young discloses,

(1) assigning a node as a new focus node if it is the only lit direct descendent of a focus node after step (see Figure 9, last paragraph) (e.g. The transition from one attribute to another regarding the pizza changes the focus of the dialog).

It would have been obvious to one of ordinary skilled in the art at the time the invention was made to have modified the dialogue management system using a tree based structure as taught by Abella *et al.* with the inclusion of focus node assignment as taught by Young. The motivation to have combined the two

Art Unit. 2020

references involves the clarification of the attribute that is active (see Young, pages 7, sect. 4, last paragraph-page 8, lines 1-9 and last paragraph).

As to claims 6 and 11, Abella et al. and Young discloses

wherein step (c)(1) further comprises: if the new focus node is a leaf node, identifying the user need (see Young, sect. 4, 1st paragraph, and bullets 3-10) (e.g. The size of the pizza is determined where the size is the leaf node and requesting from the user size type desired); and if the new focus nodes is not a leaf node, prompting the user to disambiguate between descendent nodes of the new focus node and returning to step (b) (see Young, sect. 2.1, example, types of olives for toppings is requested from the user and disambiguation has taken place to determine which olives the user desires.);

As to claim 7, Abella et al. and Young discloses

prompting the user for input to disambiguate between descendent nodes of the new focus node; and returning to step (b) (see Abella *et al.*, col. 9, lines 41-44 and lines 50-67).

As to claims. 8 and 12, Abella et al. and Young discloses wherein,

if after step (b), only one lit node exists that is not a direct descendent of the focus node, and the one lit node is a leaf node (see Abella *et al.*, Figure and col. 9, lines 41-44 and lines 50-67) (e.g. From the cited portions, term "Atlantic

Application/Control Number: 10/763,085

Art Unit: 2626

City" is searched, which is not a direct descendent of the focus node, element 60

of Figure 4), the method further comprises: identifying the user need according to

the lit leaf node (see Abella et al., col. 9, lines 61) (e.g. The user is asked

whether the term "Atlantic City" is a location or a movie title.).

As to claims 9 and 13, Abella et al. and Young discloses wherein,

wherein if only one lit node exists that is not a direct descendent of the focus node and the one lit node is a leaf node, the method further comprises presenting information to the user regarding a condition of the lit leaf node (see Abella *et al.*, col. 9, lines 61) (e.g. The user is asked whether the term "Atlantic City" is a location or a movie title).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wang et al. (US 6,505,162) is cited to teach a dialogue management system using a hierarchical tree for managing dialog state. Abella et al. (US 7,139,717) is cited to disclose a spoken dialog system pertinent to dialog management. Zhang et al. (US 2002/0077815) is cited to disclose discloses an information search method for dialog systems using category tree. Ammicht et al. (US 2003/0233230) is cited to disclose discloses the resolution of ambiguity in spoken language system using tree.

Agarwal (EP 0895396) is cited to disclose a spoken dialog system using states.

Art Unit: 2626

The NPL documents by Chu-Carroll *et al.* ("Dialogue management in vector-based call routing") cited to disclose call routing and disambiguation. Grosz ("The Representation and Use of Focus in Dialogue Understanding") is cited to disclose the use of focus in dialog systems. Rudnicky *et al.* ("An Agenda-based dialog management architecture for Spoken Language Systems") is cited to disclose a dialog system and bringing topics into focus. Lin *et al.* ("Consistent Dialogue Across Concurrent Topics Based on an Expert System Model") is cited to disclose a dialog system for multiple topics using a plan-based approach.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paras Shah whose telephone number is (571)270-1650. The examiner can normally be reached on MON.-THURS. 7:30a.m.-4:00p.m. EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Edouard can be reached on (571)272-7603. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
